

AIV Admissibility Standard (v1.0)

1. Scope

An artifact/certificate set is admissible iff its AIV certificates verify.

2. Required files per certificate

- certs/AIV_CERT_*.json
- certs/AIV_CERT_*.hash (sha256 of the JSON file)
- certs/AIV_CERT_*.hash.minisig (minisign signature over the hash file)

3. Trust anchor

- keys/aiv_pub.key

4. Verification procedure

For each certificate JSON:

- (a) compute sha256(JSON) and compare to certs/*.hash
- (b) verify certs/*.hash.minisig against keys/aiv_pub.key

Reference command:

```
./scripts/verify_cert.sh certs/AIV_CERT_<ID>.json
```

5. Enforcement

Repositories claiming AIV admissibility **MUST** run verification in CI on push and PR.
